# PART B
# Two Writing Questions
# Answer ONLY ONE (10 marks)

## Question 1:

**Write an extended definition paragraph for FOUR of the following terms (50-70 words) in which you define, explain, and discuss the following grammatical terms and concepts clearly and fully as they are discussed in the relevant course unit materials.** Support your answers with appropriate examples to illustrate your understanding, using your own words.

1. Structural Grammar ***(2.5 marks)***
2. Verb Groups ***(2.5 marks)***
3. A clause complex ***(2.5 marks)***
4. Analysis of a register ***(2.5 marks)***
5. Circumstances in a clause ***(2.5 marks)***

## Question 2:

Read the text below, pay close attention to the language used. Then, write an essay (250 – 300 words) discussing the three register variables (situational varieties) it represents.

a. **Field:** what topic is being talked/written about, and how is it being represented?
b. **Mode:** what is the medium of communication (speech or writing), degree of interactivity, and spontaneity?
c. **Tenor:** What are the social roles and relationships of the interactants?

Identify which features of the language enable you to answer this question and make some predictions by pointing out ***aspects of grammar and vocabulary*** used in the text. Support your answer with relevant examples from the given text. ***(10 marks)***

Artificial Intelligence (AI) has rapidly become part of everyday life, shaping the way people work, learn, and interact. From voice assistants that answer questions instantly to recommendation systems that suggest what to watch or buy, AI applications influence decisions both small and significant. In education, AI tools provide personalized learning pathways, offering immediate feedback that supports learners' strengths while addressing their weaknesses. In professional contexts, AI speeds up data analysis, helping organizations make informed choices. Despite these benefits, concerns remain about job displacement, data privacy, and the ethical use of intelligent systems. The challenge today is to balance innovation with responsibility, ensuring that AI develops in ways that benefit society while minimizing risks.
