PART A: [15 Points]
Read the following passage and respond to the prompts that follow it:

The popularity of electric vehicles (EVs) has grown dramatically as consumers and governments look for cleaner alternatives to traditional cars. Improvements in battery technology, government incentives, and environmental awareness have all contributed to this shift. However, questions remain about affordability, infrastructure, and the environmental cost of battery production.

While electric vehicles can significantly reduce greenhouse gas emissions, their widespread adoption requires coordinated efforts to expand charging networks and develop recycling systems for used batteries. The future of sustainable transportation lies not only in innovation but also in collaboration between industries, policymakers, and consumers.

— Lina Haddad, "Driving Toward a Greener Future."
