   c. A variable can contain any special char
   d. None of the above
8. What is React Native primarily used for?
   a. Building web applications
   b. Building mobile applications
   c. Creating server-side applications
   d. Designing user interfaces
9. Which of the following is core component in React Native that allow user to enter text?
   a. <TextInput>
   b. <Text>
   c. <Button>
   d. <ImageView>
10. In JavaScript document.querySelector('p') selects
    a. Last p element of html file
    b. All p elements of html file
    c. First p element of html file
    d. None of the above

PART 2 (30 Marks)

Answer the following question.

1. Consider the following table structure for a Tutor Courses database:

TutorCourses (TutorID, CourseID, CourseName, TutorName) Primary key: (TutorID, CourseID)

CamScanner

To which normal form this table confirms and how can it be resolved to satisfy the next higher normal form? Show the tables in the next higher normal form. [10 marks]

2. What is the output of the following PHP code, and explain the role of the static keyword in this context? [5 marks]

```
function counter() {
    static $count = 0;
    $count++;
    echo $count . " ";
}

counter();
counter();
counter();
```

3. In React Native, what is the key difference between state and props, and how are they used in a component? [5 marks]

4. Explain the key differences between the Check Boxes and Radio Buttons used inside the html forms. Include at least four differences in your explanation. [10 marks]

PART 3 (50 Marks)

Answer the following questions

1. Figure-2 shows a Product Feedback Form that contains 5 fields. Provide the proper code to insert data from this feedback form into a table named feedback in the evm_db database using a PHP script named feedback_submit.php [30 Marks]

   The method used to post the data of this form is "POST". Your answer must include the following

   a. Create a table called "feedback" using SQL that must have the form fields to store the data.
   b. Code "feedback_submit.php" that accepts the data and insert data into the feedback table. This must include
      i. Database configuration parameters such as
         1. Server Name: "localhost"
         2. User Name: "resort"
         3. Password: "pass_resort"
         4. Db Name: "resort_db"
      ii. Create connection
      iii. Check connection
      iv. Prepare SQL statement and bind data
      v. Set parameters and execute
      vi. Close statement and connection
