Question 5 (10 marks: 35 minutes)

Read the English excerpt below from a research article on bone and joint pain and translate it into Arabic while ensuring that your translation follows the norms and conventions of Arabic medical texts.

Bone pain is a common manifestation of severe bone disease in patients with advanced kidney disease. It is usually aggravated by weight bearing or a change in posture. Pain is most common in the lower part of the back, hips, and legs but may occur in the peripheral skeleton. Occasionally, sudden appearance of pain around the knee, ankle, or heel can suggest acute arthritis; such pain is not usually relieved by massage or local heat.
