PART 2 (30 Marks)

Answer the following question.

1. Consider the following table structure for a Student Courses database:

StudentCourses (StudentID, CourseID, CourseName, Instructor) Primary key: (StudentID, CourseID)

To which normal form this table confirms and how can it be resolved to satisfy the next higher normal form? Show the tables in the next higher normal form. [10 marks]

2. What is the output of the following PHP code, and explain the role of the global keyword in this context? [5 marks]

```
$x = 10;
function test() {
    global $x;
    $x += 5;
    echo $x;
}
test();
echo $x;
```

3. In React Native, what is the key difference between state and props, and how are they used in a component? [5 marks]
4. Explain the key differences between the GET and POST methods when submitting form data. Include at least four differences in your explanation. [10 marks]

PART 3 (50 Marks)

Answer the following questions

1. Figure-1 is a user registration form having 5 fields. Provide proper code to insert data of the user registration form to "user" table in "evm_db" database through "user_registration.php" server file. [30 Marks]
   The method used to post the data of this form is "POST". Your answer must include the following
   a. Create a table called "User" using SQL that must have the form fields to store the data.
   b. Code "user_registration.php" that accepts the data and insert data into the user table. This must include
      i. Database configuration parameters such as
         1. Server Name: "localhost"
         2. User Name: "EVM"
         3. Password: "pass_evm"
         4. Db Name: "evm_db"
      ii. Create connection
      iii. Check connection
      iv. Prepare SQL statement and bind data
      v. Set parameters and execute
      vi. Close statement and connection
