TM291
Management Information Systems

Midterm Examination (MTA)
Spring Semester 2024/2025

Date: 7 /April/2025

Number of Exam Pages: 3 (including this cover sheet)	**Time Allowed: 1.5 hours**

Instructions:

ALL QUESTIONS ARE COMPULSORY

- Please bear in mind that examiner should watch for answers that demonstrate student's ability to comprehend, DISCUSS and apply concepts in real life situations and ***NOT*** how accurately they can ***regurgitate*** the study materials. Hence this marking guidelines suggest key points and concepts that students are expected to cover.
- More than ever, examiners should use their academic judgment in grading each question.
- You have to be FAIR, ***not too lenient and not too strict***. You should be able to justify the given marks.
- Make sure that you read all answers and show a proof (a tick & a short comment) on EACH page that it has been read.
- Please reward students presenting advanced analytical skills along with appropriate examples supporting the discussion.
- Marks for each part of the question should be shown clearly. The TOTAL mark for each question should also be shown on the top of the page for that particular question ***e.g. (15/33)***.
- Marking needs to be done in ***GROUP*** and ***DOUBLE MARKING***. At least two tutors should participate in marking a single Answer Script. General comment should be written in the comment box.

Answer all the questions:

Question 1: (10 Marks)

A. Name three examples of IT infrastructure components

B. Explain the difference between data and information

C. What are some examples of organizational problems that businesses face?

Question 2: (10 Marks)

A. What is the role of Management Information Systems?

B. Describe the goals of Customer Relationship Management Systems.

C. Compare and contrast the functions and purposes of Management Information Systems (MIS) and Decision Support Systems (DSS).

Question 3: (10 Marks)

A. What are relational databases?

B. How does a primary key differ from other key fields?

C. Based on the following description, create an Entity-Relationship Diagram (ERD). The database should store information about a company's suppliers and the parts they provide. Each supplier has a unique Supplier_ID, Supplier_Name, and Address. Parts also have a unique Part_ID, Description, Unit_Price, and Supplier_ID indicating which supplier provides the part.
