Question 5 (10 marks: 35 minutes)

Read the English excerpt below from a research article on bone and joint pain and translate it into Arabic while ensuring that your translation follows the norms and conventions of Arabic medical texts.

Bone and joint pain can occur in response to numerous conditions including trauma, infection, inflammation, autoimmune disease, genetic driven disease states, joint and bone pathology associated with aging, and cancer. Bone and joint associated pain can be acute (e.g. due to trauma), recurring, or chronic in nature. It is important to recognise that bone and joint pain is very complex, with multiple types of pain that may require different treatment strategies for complete pain management.
