Faculty of Business Studies
ACC300
Accounting Information System
Final Exam
Version A
Fall 2019/2020
30 Dec 2019

Number of Exam Pages: 6 (including this cover sheet)	**Time Allowed: 2.30 hours**

Instructions:

- This examination consists of **Three Compulsory Questions**; all questions in total are marked out of 100 and are worth 50% of the overall assessment component.
- Use the Answer Booklet provided to you to answer the questions, and do not forget to write your name and student number in the specified space on the cover of the Answer Booklet.
- Read each question carefully and make sure that you understand it before you begin answering.
- In questions that require calculations, credit will be given for showing your detailed workings.
- Programmable calculators are not permitted or to share, or to pass them between each other in an examination. Also, you are not permitted to use calculators with word processing capabilities.
- Keep in mind that any form of cheating will not be tolerated and will subject you to AOU Cheating Policy.

Question 1: (30 marks) (20*1.5 each)

State whether the following statements are TRUE (T) or FALSE (F)

1. Classes could be grouped into Resources (R), Entities (E), and Assets (A) in data modeling.
2. Queries in Access are utilized by users to enter data into tables and view existing records.
3. Three types of data models used today are: the hierarchical model, the network model and the relational model.
4. Access offers modules, which are defined by users to automate processes like opening a specific form.
5. Cloud computing is an internet-based computing where shared resources, software, and information is provided to firms on demand.
6. BPMN models can describe the collaboration between two organizations using pools.
7. A pool in a BPMN model does not actually have to display any activities.
8. Application controls limit who can change records in a system.
9. Business rules are unrelated to COSO control activities, although they serve an important purpose.
10. Many-to-many relationships are implemented by posting a foreign key.
11. Each attribute in a table can have several names.
12. One-to-one relationships are implemented by creating a linking table.
13. Data warehouses are often designed to facilitate decision making such as those often used in managerial accounting and facilitate management by exception, such as variance reports, trend reports, variance analysis reports, and reports that show actual performance are compared to budgeted information.
14. XBRL produces standardized reports and is not customizable.
15. XBRL allows highly disaggregated data so not only is it possible to know the level of sales, but it is possible to know sales revenue in much more detail.
16. Access is a simple database management system that can be used to run databases for individuals and small firms.
17. SQL is based on relational algebra and allows a user to query and update the database.
18. The asterisk (*) following the SELECT SQL statement is a wild card indicating all columns should be selected.
19. A BPMN process flow can start in one pool and end in the collaborating pool.
20. XBRL instance documents describe each key data element (e.g., total assets, accounts, payable, net income, etc.).

Question 2 : Choose the correct answer for the following items. (30 marks) (20*1.5 each)

1. In the generic REA model for the sales and collections process, the multiplicities between the Sales and Cash Receipts classes are displayed with question marks. Which of the following best explains this?
   A. The direction of process flow depends on the nature of the business.
   B. The quantities of items sold can't be determined until the sale occurs.
   C. The actual values will depend on the nature of the business.
   D. The customer determines the multiplicities for this association.

2. A company would like to implement a management information system that integrates all functional areas within an organization to allow information exchange and collaboration among all parties involved in business operations. Which of the following systems is most effective for this application?
   E. A decision support system.

الطالب الأكاديمي THE ACADEMIC STUDENT www.asckwt.com

F. An executive support system.
G. An office automation system.
H. An enterprise resource planning system.

3. What kind data model is most commonly used as a basis for today's enterprise systems?
   A. The hierarchical mode
   B. The network model
   C. The relational model
   D. None of the above

4. Which of the following is considered a class in the relational database model?
   A. Customer
   B. Sale
   C. Cash
   D. All of the above are correct

5. Which of the following statements about the requirements of table design is incorrect?
   A. Each attribute in a table must have a unique name.
   B. Values of a specific attribute must be of the same type.
   C. Each attribute (column) of a record (row) must be single-valued.
   D. All other non-key attributes in a table must describe a characteristic of the class (table) identified by the foreign key.

6. Which set of multiplicities correctly shows the relationship between the Cash Collection table and the Sales table in modeling cash sales?
   A. Cash Collection (1..1) – Sale (1..N)
   B. Cash Collection (1..N) – Sale (1..1)
   C. Cash Collection (1..N) – Sale (1..1)
   D. Cash Collection (1..1) – Sale (1..1)

7. Which of the following is not a type of data model?
   A. Hierarchical data model
   B. Network data model
   C. Normalization data model
   D. Relational data model

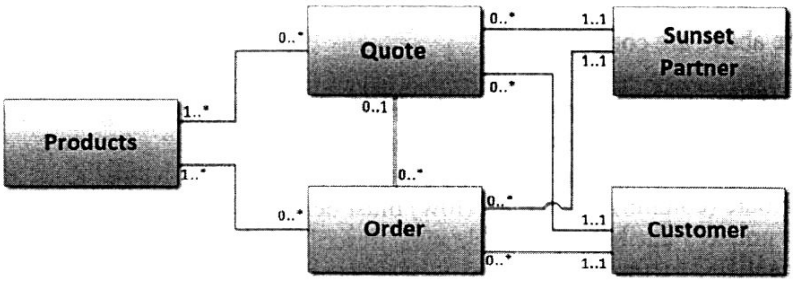

8. Which of the following about cloud computing is incorrect?
   A. Cloud computing is Internet-based computing where shared resources, software, and information are provided to firms on demand.
   B. Cloud Computing can easily host enterprise system applications.
   C. Security is a major issue to consider when using cloud computing
   D. Clients using cloud computing do not need to periodically back up data

9. Which of the following best describes the purpose of a BPMN collapsed sub-process?
   A. Shows the interchange between two pools.
   B. Depicts the sequence of activities in one pool.
   C. Contains a series of activities that are hidden from view.
   D. Illustrates the process flow when an exception occurs.

الطالب الأكاديمي THE ACADEMIC STUDENT www.asckwt.com

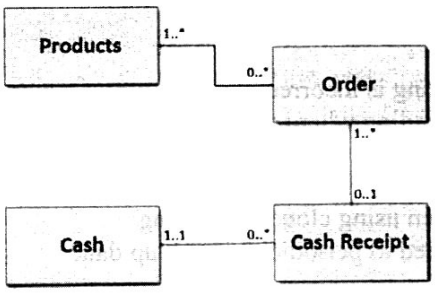

10. Which of the following best describes the difference between access controls and application controls?
   A. Access controls limit who can change records and application controls provide an audit trail of any changes.
   B. Access controls implement business rules and application controls do not.
   C. Access controls are "prohibited" business rules and application controls are "allowed" business rules.
   D. There is no difference between access and application controls.

11. Refer to the following diagram. Which of the following answers provides the best interpretation of the multiplicities for the association between the Order class and the Products class?

   A. Each order must specify the same products as the previous quote.
   B. Each product has been ordered at least once.
   C. An order does not have to include a product.
   D. An order may include many products.

12. Refer to the following diagram. Which of the following answers provides the best interpretation of the multiplicities for the association between the Orders and Cash Receipt classes?

   A. Some customers pay for their orders in advance.
   B. Some orders result in several payments from the customers.
   C. Each cash receipt pays for at least one order, but it could pay for many orders.
   D. Each cash receipt pays for a minimum of 0 orders and a maximum of 1 order.

13. Refer to the following diagram. Which of the following answers does *not* provide a valid interpretation of the multiplicities for the association between the Inventory and

الطالب الأكاديمي THE ACADEMIC STUDENT www.asckwt.com

the Product Category classes?

A. Every product category is managed by one employee.
B. Every product category includes at least one inventory item.
C. Some product categories do not include inventory items.
D. Every inventory item is in at most one product category.

14. Which of the following occurs at the same time a sale of goods occurs?
A. Reduction in accounts receivable
B. Increase in inventory
C. Increase in accounts payable
D. Recognition of cost of goods sold

15. Which of the following best describes the purpose of an intermediate timer event?
A. Shows the timing of messages between two pools
B. Determines when the business process begins
C. Illustrates the process flow when a delay occurs
D. Contains a series of activities that are hidden from view

16. Which of the following best describes the use of type images in UML class modeling?
A. Allow companies to include graphic images in class models.
B. Used to enumerate a many-to-many association between two REA classes.
C. Allow modelers to distinguish between types of activities in an activity diagram.
D. Allow categorization of REA classes based on management's information needs.

17. In a BPMN collaboration model of the purchase process, one pool describes the focal organization's activities and the other pool describes what?
A. The supplier's activities
B. The customer's activities
C. The sequence of steps in the process
D. The message flows between the pools

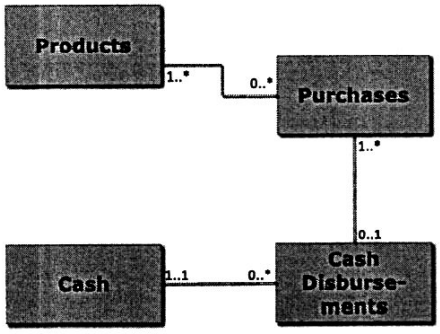

18. In a BPMN collaboration model of the purchase process, which of the following best describes the purpose of swimlanes?
A. Capturing the process complexity
B. Clarifying the interaction between pools
C. Showing the sequence of activities in a pool
D. Showing different jobs in the purchase process

19. Which of the following least reflects the purpose of a business rule in the purchase process?
A. Ensure suppliers are paid on time

الطالب الأكاديمي THE ACADEMIC STUDENT www.asckwt.com

B. Require segregation of order, receiving, and payment duties
C. Ensure suppliers are satisfied
D. Ensure an audit trail

20. Review the following diagram. Which answer provides the best interpretation of the multiplicities for the association between the Purchases and Products classes?

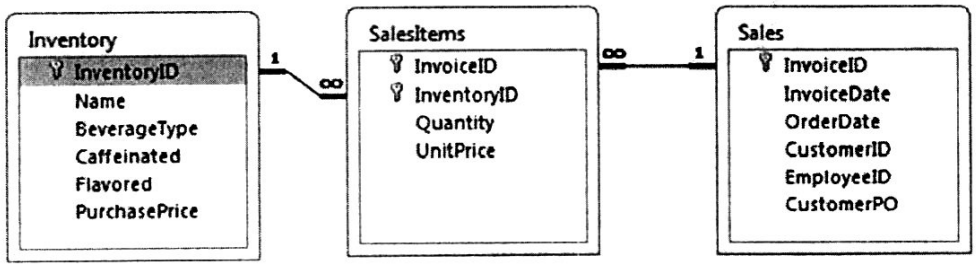

A. Each purchase order specifies many products
B. Each purchase is for one product
C. Each purchase can include many products
D. Checks are written after products are added to inventory

Question 3 (40 marks)

A- It is expected that investors and other financial statement users will ultimately demand some assurance from an auditor or external party on a firm's use of XBRL Discuss that statement showing the XBRL possible assurance objectives (25 marks).

B- Based on the three tables and the attributes below: answer the question for Requirement A and write SQL command(s) for Requirements b .

a. What are the foreign keys in the Sales table? (5 marks)
b. How many sales transactions were made in March, 2017? (10 marks)

End of Exam Questions
Good Luck
